

1 The above description and drawings of the invention are for purposes of description
2 and are not intended for limitations of the invention. What is claimed is:

3 1) A structure for theatrical presentations comprising:
4 a plurality of individual theaters each of which has two segregated levels of seating
5 for two classes of patrons and
6 a third level separate from the segregated seating levels for a motion picture
7 projection camera.

8 2) A structure described in claim 1 wherein the plurality of theaters is comprised of
9 at least one regular motion picture projection theater and at least one large format film
10 motion picture projection theater.

11 3) A structure described in claim 1 wherein each segregated seating level has
12 seating for disabled patrons at areas other than only at the very front of the theater.

13 4) A structure described in claim 1 wherein one segregated seating area of the theater
14 is comprised of a balcony and the other segregated seating area is comprised of a lower
15 ground level.

16 5) A structure described in claim 1 wherein each individual theater has multiple
17 sound speakers placed throughout the theater so as to eliminate sound dead spots in the
18 theater.

19 6) A motion picture theater comprising:
20 two segregated seating areas for two distinct classes of patrons and
21 a third segregated area for placement of a motion picture projection system.

22 7) A theater described in claim 6 wherein one segregated seating area is a balcony
23 level of the theater with its separate entrance and exit areas and the other segregated
24 seating area is a ground level seating area with separate entrance and exit areas.

25 8) A theater described in claim 6 wherein the motion picture projection level of the
26 theater is located between the upper balcony seating area and the lower ground level
27 seating area.

28 9) A motion picture theater described in claim 6 wherein separate seating for

1 disabled persons is provided for at areas of the theater other than at the very front of the
2 theater.

3 10) A motion picture theater described in claim 6 wherein multiple speakers are
4 located in the theater in such a manner that sound dead spots are eliminated.
